

Wedge wire baskets for sugar centrifuges

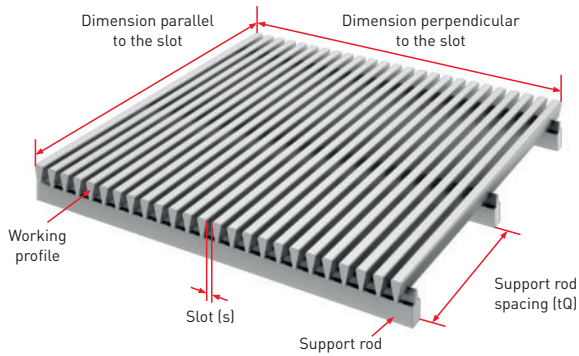

We provide comprehensive services for sugar factories in the selection of technical parameters, design and production of wedge wire baskets for centrifuges.

 Higher process efficiency

 Longer operation time

 Reduced down-time

Wedge wire baskets for sugar centrifuges

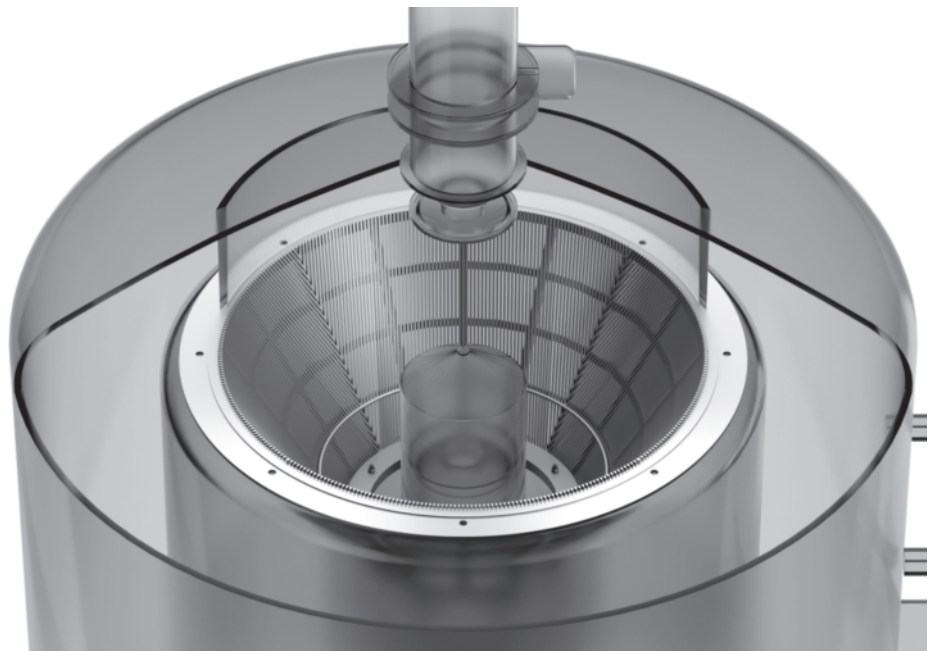

Pro-SLOT® slotted screens

Slotted screens are formed in the process of electrofusion welding of working profiles with support rods, called crossbars. Special construction guarantees a very high open area ratio while maintaining exceptional durability and life span.

The use of Pro-SLOT® slotted baskets for continuous centrifuges eliminates cracking of sugar crystals, ensuring high quality of the final product, and the horizontal arrangement of slots enables quick separation of sugar crystals and molasses.

The coefficient of friction as the sugar crystals move across the screen surface is also reduced, which in turn extends the life of the baskets and minimizes downtime.

Technical parameters

Slot opening	Working profiles	Supporting crossbar	Manufacturing material
from 0,04 mm	6 Sb – 42 Sb	D45, rod ø6, Q55	1.4301, 1.4404

Technical advisory

Take advantage of professional service and support from an experienced team of technical advisors, constructors and technologists at every stage of cooperation – from design to expert service.
