

Wedge wire baskets for salt centrifuges

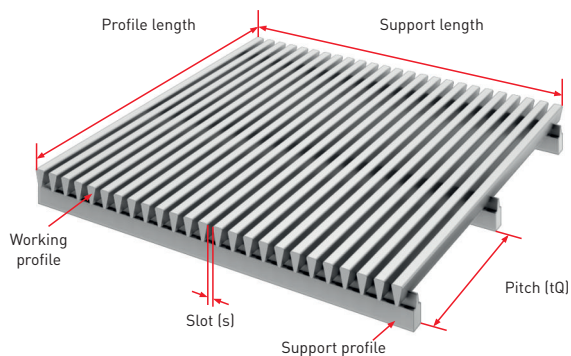

We provide comprehensive services for salt producers in terms of technical parameters selection, design and manufacturing of baskets for centrifuges.

 Improved process efficiency

 Extended working life

 Reduced downtime

Wedge wire baskets for salt centrifuges

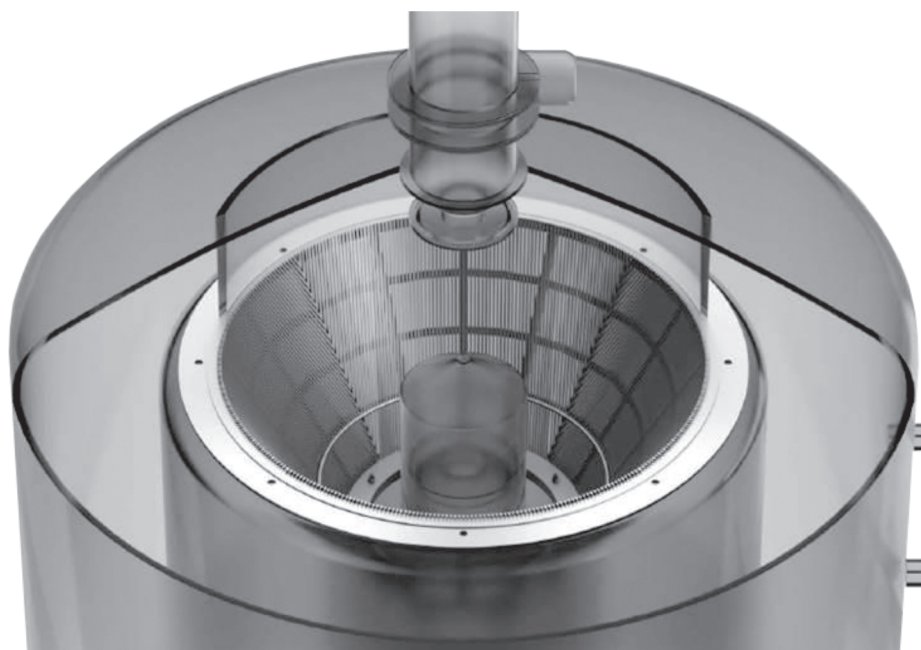

Pro-SLOT® wedge wire screens

are manufactured by welding special profiled working wires to support wires at an angle of 90 degrees.

A precise slot is received by means of applying modern welding technology between working wires and support wires. The result is a rigid screen construction with the capability of withstanding heavy loads.

We manufacture centrifuge baskets on the basis of the Pro-SLOT® wedge wire screens for mechanical dewatering and enrichment processing of salt, mineral materials, fine coal, sugar, starch, wastewater, metal chips (oil recovery) and others.

We offer wide range of the baskets types for the following centrifuges: Siebtechnik/TEMA, Andritz Separation, KMPT, Krauss Maffei, KHD, Bird, Humbolt, Broadbent and others. We deliver our products globally.

Technical parameters

Slot	Working profiles*	Support rods*	Material*
from 0,1 mm	Sb, Sb 55, Sbb	Type I, Type Q, Type D	1.4301, 1.4571, 1.4462, 1.4539
